

## GLOBAL REPORT

	No of participants	No of responded participants	Response percentage
Helicobacter pylori, antibodies, March, 1-2024	155	148	95.5 %

## Summary

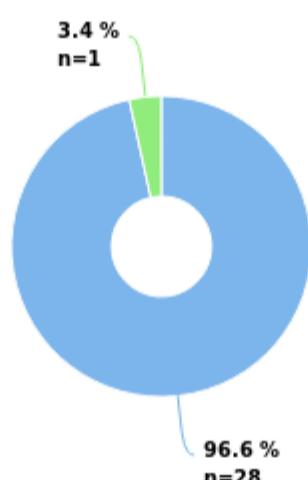

Summary	AVR success rate
Sample S001	93.8 %
Sample S002	99.2 %
Average:	96.5 %

**Sample S001**

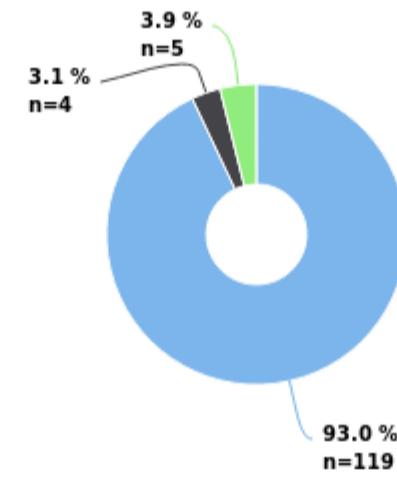

Sample S001 results	Responded	AVR success rate	Count
	Clinical interpretation, qualitative methods	96.6 %	29
	Clinical interpretation, quantitative methods	93 %	128
	HepyAb	100 %	29
	HepyAbA	93.3 %	30
	HepyAbG	92.9 %	127
Total:		93.8 %	343

Sample S001 Clinical interpretation, qualitative methods

■ No indication of infection  
■ Active or past infection

Sample S001 Clinical interpretation, quantitative methods

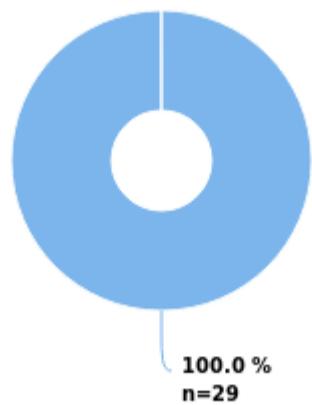

■ No indication of infection  
■ Borderline interpretation  
■ Active or past infection

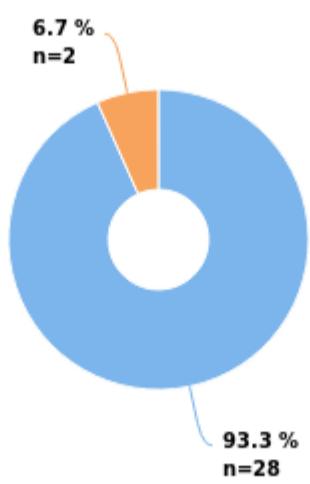

Clinical interpretation, qualitative methods	Interpretation	Interpretation count	AVR success rate	Interpretation Score
	No indication of infection	28	100 %	4
	Active or past infection	1	0 %	0
Total:		29	96.6 %	

Clinical interpretation, quantitative methods	Interpretation	Interpretation count	AVR success rate	Interpretation Score
	No indication of infection	119	100 %	4
	Borderline interpretation	4	0 %	0
	Active or past infection	5	0 %	0
Total:		128	93 %

**Report Info****PARTICIPANTS**

Altogether 155 laboratories from 26 countries participated in this EQA round.

**REPORT INFO**

The results are divided into groups according to the method stated by the laboratory and presented in laboratory-specific tables. Accepted results are marked with green color and laboratory's own result with a black radio button  . In the scoring report you will find summaries of overall success rate and sample specific success rates (%). Sample specific interpretations are shown in pie diagrams as percentages and the total interpretation and methodic counts in the tables. If you have not reported any results you will get a note: "You have not responded in time, only global report is available."

For information on report interpretation and performance evaluation, please see the "EQAS Interpretation guidelines" in LabScala User instructions. In case you have any questions regarding the reports, please contact the EQA Coordinator.

**SCORING**

The round is scored based on test results and clinical interpretations when 60% or more of the participants report the expected result and when at least three results are reported. The following general rules are applied:

Correct/expected test result 2/2 points

False/deviating test result 0/2 points

Correct/expected clinical interpretation 4/4 points

False/deviating clinical interpretation 0/4 points

The performance of the laboratory is assessed by the Own success rate (%). The target is 100%. The examination-specific scores obtained by the laboratory in the round are converted to Own success rate per sample (scores/maximum scores\*100). The Laboratory's Own success rate is the average of the sample success rates.

The success rate for the entire round (AVR success rate) is calculated from the total number of scores given to the results per sample (all scores/maximum scores\*100). The AVG success rate of the entire round is the average of the sample success rates. The difference in the Laboratory's Own success rate (%) to the corresponding numbers for the entire round is shown in the table.
